SCC3000US Crawler Crane — Operation Manual

1 General

1.1 Calculation of Rated Loads

Rated loads in the load charts are determined either by strength or by stability.

Rated loads determined by stability are calculated according to ISO 4305:1991 Mobile Cranes— Determination of Stability and these rated loads are always within the 75% of tipping load.

1.2 Use the Load Charts Properly

1)Ground conditions: rated loads in the load charts are calculated in the condition that the crane is on hard, horizontal and evenly-supported ground with gradient smaller than 1%. If these condition requirements are not fulfilled, the value of rated loads must be decreased for calculation.

2)Actual Lifting Capacity: the weight of hook blocks, lifting devices, and wire ropes reeving between the hooks and boom/jib heads must be deducted from the rate load to obtain a net lifting value, i.e. the actual lifting capacity.

Table 3-1 Hook Parameters

Model (t) (USt)	250 (275)	150 (165)	100 (110)	80 (88)	35 (39)	13.5 (15)
Deadweight (kg) (lb)	4300 (9,480)	3100 (6,830)	2000 (4,400)	1500 (3,300)	1200 (2,640)	450 (990)

Notes:Weight of wire ropes reeving between hooks (main hook, auxiliary hook) and boom/jib heads is calculated by 3.3kg/m(2.22lb/ft).

3)Wind Speed: Calculating rated loads also takes allowable wind speed of each operating condition into consideration. The SCC3000US crawler crane is allowed to operate when the speed of stable wind or gust is not exceeding 16m/s(35.8mph). Hence the maximum allowable wind speed for SCC3000US crawler crane is 9.8m/s(21.9mph)~16.0m/s (35.8mph) (equivalent to 60~160 N/m² (0.009~0.023psi) dynamic pressure); when the wind speed is higher than 16m/s and lower than 22m/s(49.2mph), the crane is not allowed to operate but allowed to have the boom system upstanding; when wind speed is higher than 22m/s(49.2mph), the boom system must be lowered down to the ground.

Table 3-2 Allowable Wind Speed in H Operating Condition

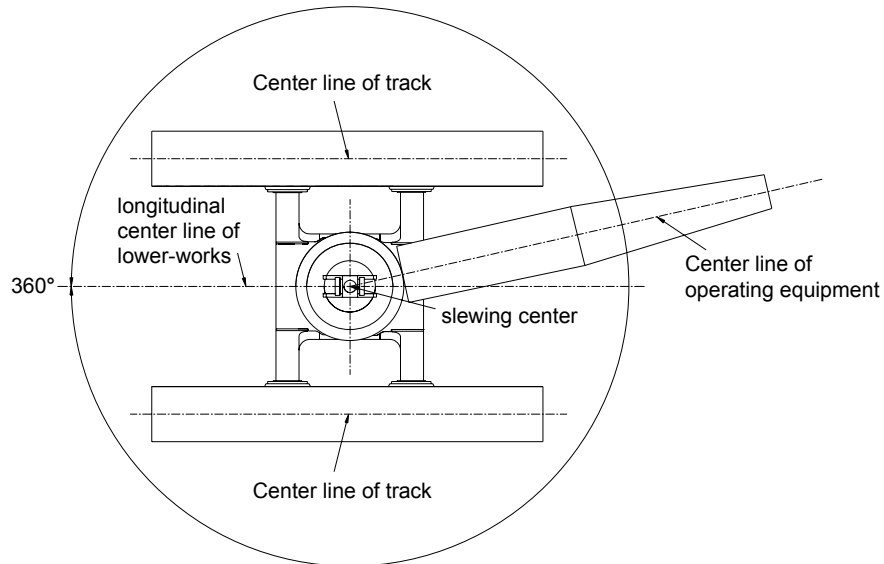

Boom length (m) (ft in)	Allowable wind speed (m/s) (mph)	Corresponding allowable dynamic pressure (N/m ²) (psi)
<28.5~31.5 (93'6" ~103'4")	16 (35.8)	160 (0.023)
31.5~34.5 (103'4"~113'2")	15 (33.6)	140 (0.02)
37.5~64.5 (123'0"~211'7")	13.8 (30.9)	120 (0.017)
67.5~82.5 (221'5"~ 270'8")	11.3 (26.40)	80 (0.012)
>85.5 (280'6")	9.8 (21.9)	60 (0.009)

Table 3-3 Allowable Wind Speed in FJ (LJ) Operating Condition

Length of boom + jib (m) (ft in)	Allowable wind speed (m/s)(mph)	Corresponding allowable dynamic pressure (N/m ²)(psi)
<28.5~31.5 (93'6" ~103'4")	16 (35.8)	160 (0.023)
31.5~37.5 (103'4"~123'0")	15 (33.6)	140 (0.02)
37.5~44.5 (123'0"~145'12")	13.8 (30.9)	120 (0.017)
44.5~71.5 (145'12"~234'7")	11.3 (26.40)	80 (0.012)
>98.5 (323'2")	9.8 (21.9)	60 (0.009)

If the wind speed at operating site cannot fulfill the requirements listed above, the crane is not allowed to operate until the load is reduced accordingly based on the actual situation. For further information on influences of wind speed, please refer to "Influence of Wind Speed" in "Operation Manual-Section 4 Operating Instructions" .

4) Scope of Application: values or rated loads listed in the load charts are all applicable for the whole 360° slewing range.

5) Rated Load for Traveling Crane: values of rated loads listed in the load charts are calculated in condition that the crane is not traveling, and these values should be decreased accordingly when the crane is traveling. For traveling steadily at low speed, 90% of the rated load is allowed to attach in H operating condition for straight-line traveling, or 70% of the rated load is allowed to attach in H operating condition for turning, or 50% of the rated load is allowed to attach in FJ operating condition and LJ operating condition for straight-line traveling.

Notices requiring special care for traveling with load:

- It is suggested to move the load in an area as small as possible and make the load close to the ground enough (with maximum distance of 500mm (1'7.7") to the ground);
- Only the low gear can be used if possible, and take proper measures to prevent the load swinging. For specifications on traveling, please refer to the "Traveling Operation" in Chapter II of this manual.

H Operating Condition

Jindal Infrastructures Pvt. Ltd.

Notes: 1. the rated hoisting capacity specified in the table means the operating condition under which standard counterweight and additional counterweight are included, while the vertical value specified in the black box means the operating condition under which only standard counterweight is included.

2. The grey filling part specified in the above table is determined by strength.

Notice: 1. the actual hoisting capacity shall be the value of rated hoisting capacity deducting the weight of hook blocks, wire ropes and all the spreaders.

2. The rated load shown in the table is the weight of cargo which is slowly and steadily lifted by crane on flat and hard ground under the non-travel load condition.

3. The load rating is calculated not exceed 75percent of the load depending on stability or structure.

HC Operating Condition

Jindal Infrastructures Pvt. Ltd.

Notes: 1. the rated hoisting capacity specified in the table means the operating condition under which standard counterweight and additional counterweight are included, while the vertical value specified in the black box means the operating condition under which only standard counterweight is included.
 2. The grey filling part specified in the above table is determined by strength.

Notice: 1. the actual hoisting capacity shall be the value of rated hoisting capacity deducting the weight of hook blocks, wire ropes and all the spreaders.

2. The rated load shown in the table is the weight of cargo which is slowly and steadily lifted by crane on flat and hard ground under the non-travel load condition.

3. The load rating is calculated not exceed 75percent of the load depending on stability or structure.

HC Operating Condition

Jindal Infrastructures Pvt. Ltd.

Notes: 1. the rated hoisting capacity specified in the table means the operating condition under which standard counterweight and additional counterweight are included, while the vertical value specified in the black box means the operating condition under which only standard counterweight is included.

2. The grey filling part specified in the above table is determined by strength.

Notice: 1. the actual hoisting capacity shall be the value of rated hoisting capacity deducting the weight of hook blocks, wire ropes and all the spreaders.

2. The rated load shown in the table is the weight of cargo which is slowly and steadily lifted by crane on flat and hard ground under the non-travel load condition.

3. The load rating is calculated not exceed 75percent of the load depending on stability or structure.

FJ Operating Condition

Jindal Infrastructures Pvt. Ltd.

Notes: 1. the rated hoisting capacity specified in the table means the operating condition under which standard counterweight and additional counterweight are included, while the vertical value specified in the black box means the operating condition under which only standard counterweight is included.

2. The grey filling part specified in the above table is determined by strength.

Notice: 1. the actual hoisting capacity shall be the value of rated hoisting capacity deducting the weight of hook blocks, wire ropes and all the spreaders.

2. The rated load shown in the table is the weight of cargo which is slowly and steadily lifted by crane on flat and hard ground under the non-travel load condition.

3. The load rating is calculated not exceed 75percent of the load depending on stability or structure.

Notes: Figures in framed cells indicate that the rated load depends on the strength.

Notice:

- 1.The actual hoisting capacity shall be the value of rated hoisting capacity deducting the weight of hook blocks, wire ropes and all the spreaders.
- 2.The rated load shown in the table is the weight of cargo which is slowly and steadily lifted by crane on flat and hard ground under the non-travel load condition.
- 3.The load rating is calculated not exceed 75percent of the load depending on stability or structure.

Notes: The grey filling part specified in the above table is determined by strength.

Notice: 1. the actual hoisting capacity shall be the value of rated hoisting capacity deducting the weight of hook blocks, wire ropes and all the spreaders.

2. The rated load shown in the table is the weight of cargo which is slowly and steadily lifted by crane on flat and hard ground under the non-travel load condition.

3. The load rating is calculated not exceed 75percent of the load depending on stability or structure.

LJ Operating condition

Notes: Figures in framed cells indicate that the rated load depends on the strength.

Notice:

1. The actual hoisting capacity shall be the value of rated hoisting capacity deducting the weight of hook blocks, wire ropes and all the spreaders.
2. The rated load shown in the table is the weight of cargo which is slowly and steadily lifted by crane on flat and hard ground under the non-travel load condition.
3. The load rating is calculated not exceed 75 percent of the load depending on stability or structure.

Notes: The grey filling part specified in the above table is determined by strength.

Notice: 1. the actual hoisting capacity shall be the value of rated hoisting capacity deducting the weight of hook blocks, wire ropes and all the spreaders.

2. The rated load shown in the table is the weight of cargo which is slowly and steadily lifted by crane on flat and hard ground under the non-travel load condition.

3. The load rating is calculated not exceed 75percent of the load depending on stability or structure.

LJ Operating Condition

Notes: The grey filling part specified in the above table is determined by strength.
 Notice: 1. the actual hoisting capacity shall be the value of rated hoisting capacity deducting the weight of hook blocks, wire ropes and all the spreaders.
 2. The rated load shown in the table is the weight of cargo which is slowly and steadily lifted by crane on flat and hard ground under the non-travel load condition.
 3. The load rating is calculated not exceed 75percent of the load depending on stability or structure.

LJ Operating Condition

Notes: Figures in framed cells indicate that the rated load depends on the strength.

Notice:

1. The actual hoisting capacity shall be the value of rated hoisting capacity deducting the weight of hook blocks, wire ropes and all the spreaders.
2. The rated load shown in the table is the weight of cargo which is slowly and steadily lifted by crane on flat and hard ground under the non-travel load condition.
3. The load rating is calculated not exceed 75percent of the load depending on stability or structure.

Notes: The grey filling part specified in the above table is determined by strength.
 Notice: 1. the actual hoisting capacity shall be the value of rated hoisting capacity deducting the weight of hook blocks, wire ropes and all the spreaders.
 2. The rated load shown in the table is the weight of cargo which is slowly and steadily lifted by crane on flat and hard ground under the non-travel load condition.
